
SERCXI OPEN MANDATE

Senior SAP BTP Consultant — Business Technology Platform

A platform architect, not a configurator. This mandate is for the BTP practitioner who decides how a Dutch enterprise extends and integrates S/4HANA — and keeps the core clean while doing it.

SRX-2615 · ENGAGED MANDATE · PREPARED BY SERCXI

THE REMIT

Why this role exists now.

Across the Netherlands, corporates and MKB companies are migrating to SAP S/4HANA and finding the core ERP insufficient on its own. Advantage now comes from what sits on top: integrations connecting SAP to the rest of the enterprise, cloud-native extensions replacing custom ABAP, and analytics turning transactional data into real-time intelligence.

That is SAP BTP, and it is an architecture discipline rather than a configuration one. CIOs, enterprise architects and transformation leads need someone who can design and deliver across integration, application development, data management and AI on one platform, with the consultative weight to defend those decisions.

The client needs the platform authority who owns BTP workstreams end to end — architecture definition through implementation, testing and governance — across Dutch corporate and MKB landscapes.

LISTED

19 Aug 2026 · valid to 30 Nov 2026

WHAT THE ROLE CARRIES

- Architect and implement integration scenarios in SAP Cloud Integration, connecting S/4HANA with third-party SaaS, legacy systems and hyperscaler services.
- Design event-driven architectures on SAP Event Mesh and Advanced Event Mesh, with topic-based pub/sub and AMQP messaging.
- Build cloud-native side-by-side extensions in SAP CAP, Business Application Studio and SAP Build, reducing core modification debt.
- Design data landscapes in SAP Datasphere and SAP Analytics Cloud — models, flows, replication, federation and semantic layers grounded in S/4HANA data.
- Embed SAP AI Core, AI Launchpad and Joule into real business processes, with GenAI Hub and LLM integration patterns.
- Define the BTP security posture: Cloud Identity Services, identity provisioning, role collections, OAuth 2.0, SAML 2.0 SSO and Cloud Connector.
- Govern subaccount design, entitlements, multi-landscape CTS+ transport and CI/CD pipelines, and run governance workshops with IT leadership.

THE PROFILE

What we are looking for.

- Ten or more years in the SAP ecosystem, with at least four to five going deep on SAP BTP or its predecessors (SCP/Neo, HCP).
- Real production delivery of Cloud Integration scenarios, SAP CAP extensions and API Management.
- Hands-on command of SAP Event Mesh and Advanced Event Mesh for event-driven architecture in live landscapes.
- Data architecture depth in SAP Datasphere and Analytics Cloud, including S/4HANA extraction and semantic modelling.
- Working fluency in SAP AI Core, AI Launchpad and GenAI Hub, embedded into real SAP processes.
- BTP security and governance depth — identity services, OAuth 2.0, SAML, entitlements, CTS+ and CI/CD. Fluent Dutch and English.

THE TERMS

What the client offers.

- A platform architecture seat with genuine design authority across integration, extension, data and AI.
- Day rate or salary benchmarked to Netherlands market standards for senior SAP BTP architects.
- Contract or permanent engagement — the model is set in the scope conversation, before commitment.
- Direct access to CIOs, enterprise architects and transformation leads across Dutch corporates and MKB companies.
- Hybrid working from the Netherlands.

THE SHAPE OF THE WORK

SCOPE

Integration, extension, data and analytics, AI, platform governance

Cloud Integration · Event Mesh · CAP · Build · Datasphere · AI Core

ENGAGEMENT

Contract or permanent · EUR day rate or salary

REPORTS TO

Lead SAP Architect / CIO office

INDEX READING

The market reading behind the brief.

Current Q3 2026 displacement intensity in the sectors framing this search. Higher intensity means faster leadership turnover and sharper scarcity.

SaaS & Cloud	Displaced · 9/9
Tech Consulting	Displaced · 9/9
Workforce	Exposed · 8/9

Cloud reads at maximum displacement intensity. Every S/4HANA migration eventually becomes a platform question, and the architects who can hold integration, extension, data and AI at once are the constraint on that second wave.

CONFIDENTIALITY

The client is not named in this brief. On an engaged mandate the client's hiring intent is commercially sensitive, so the organisation is identified to you under confidence in the first partner conversation — not published to their competitors.

THE APPROACH

How this mandate runs.

01 · Day 0–1

Approach

You reach out — through this page, the partner's direct line, or a confidential booking. No application form, no CV upload to a portal. The first conversation is about fit, not paperwork.

02 · Days 2–7

Partner conversation

Harald Agterhuis, the partner who signed this mandate, speaks with you directly. The conversation establishes whether the role and your delivery record genuinely align before anyone invests further.

03 · Days 8–21

Client introduction

If the fit holds, Harald introduces you to the hiring client under confidence. The client sees a short, serious shortlist — not a pile of CVs. You meet the decision-makers and test the role against what you need.

04 · Days 22–35

Decision

The client decides. If it's a yes, Harald works the offer with you and the client to land it — including counter-offer defence. If it's a no, you get a direct debrief, not silence.
